0. Preamble

inprogress...

2. Installation

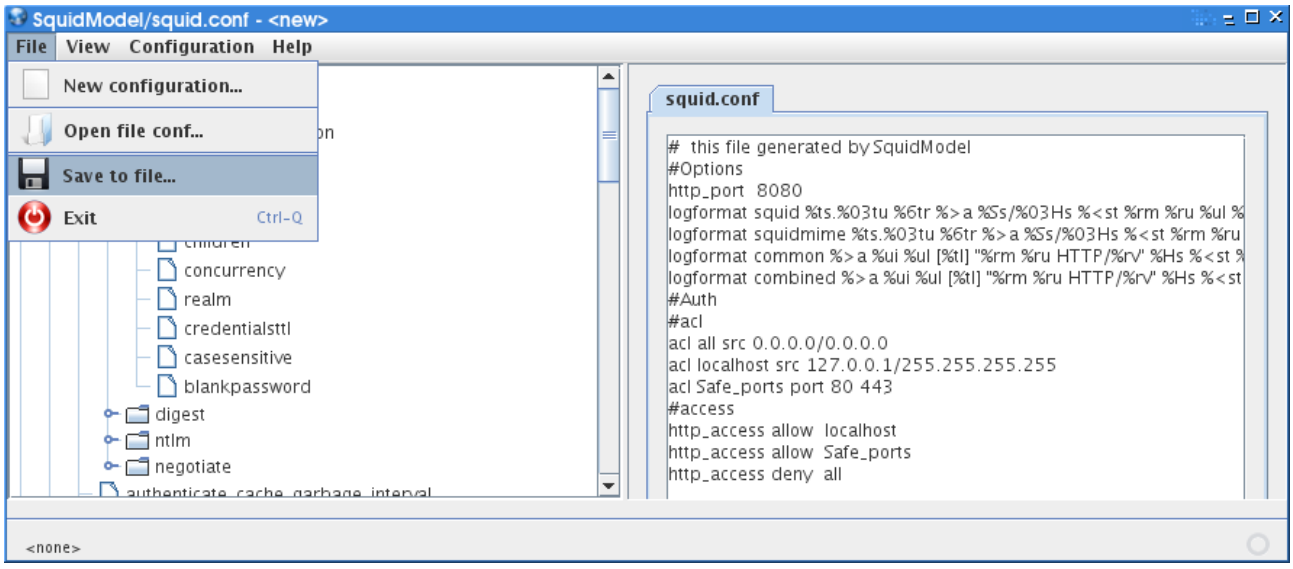

in progress...

3. Squid model interface in screenshots...

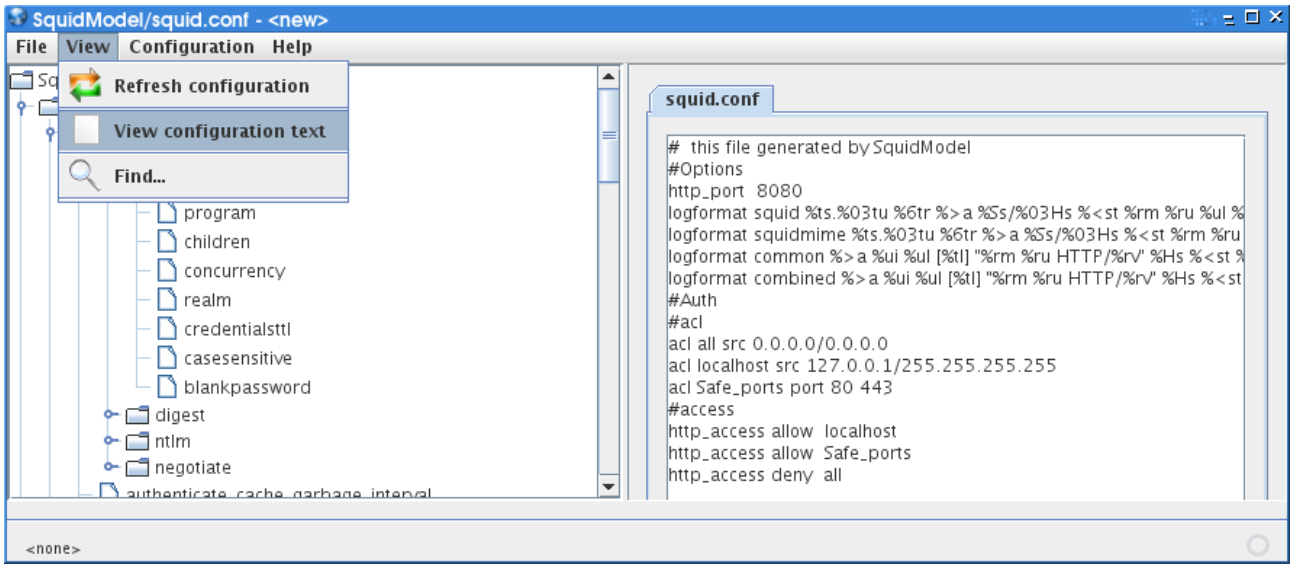

All parameters deploy by this catalog *http://www.squid-cache.org/Versions/v2/2.6/cfgman/*

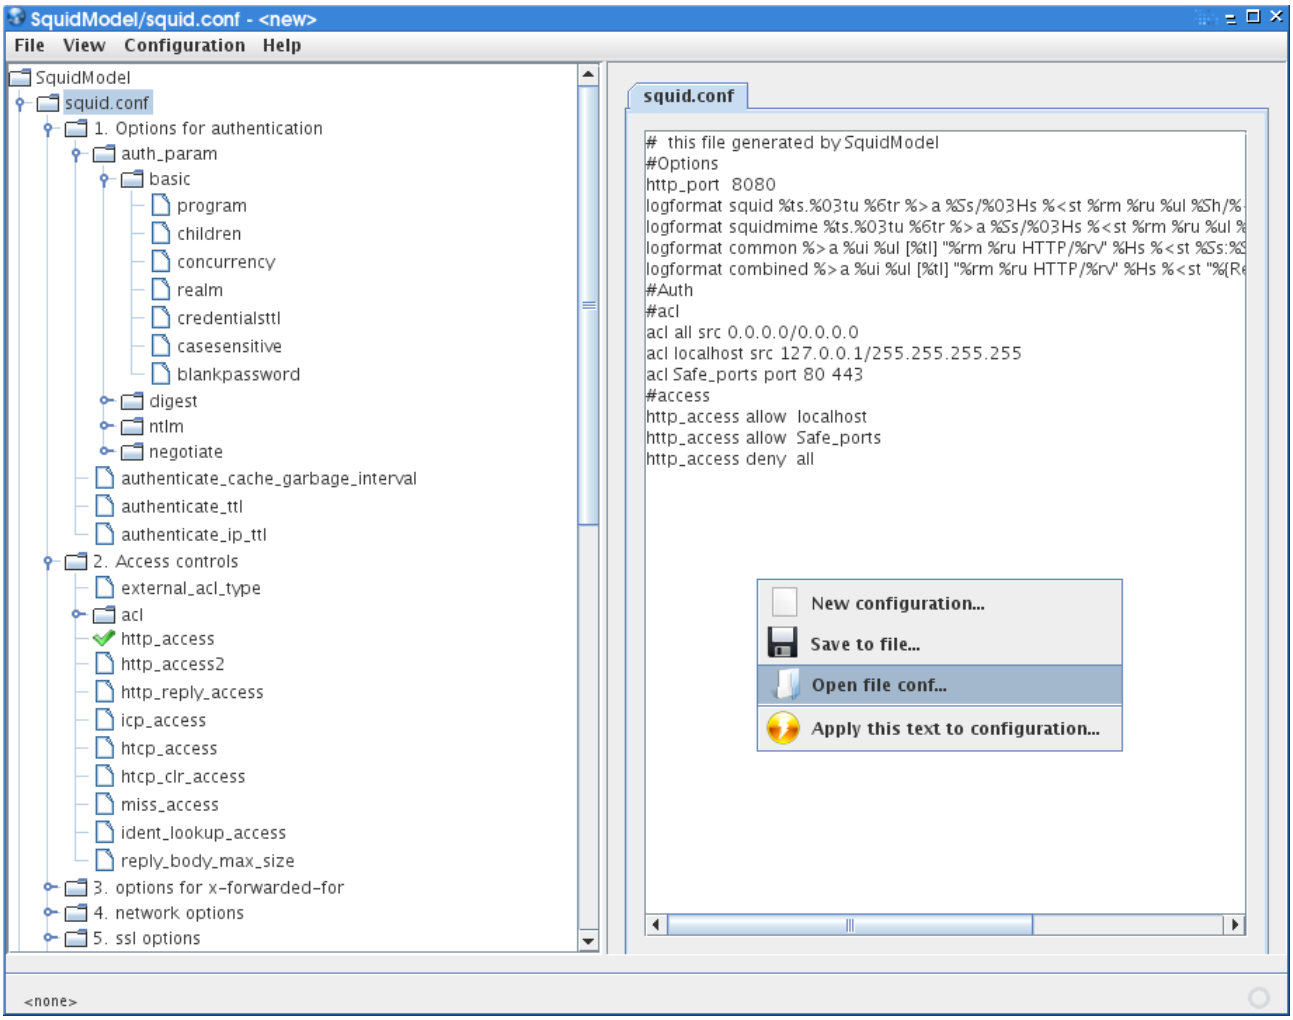

Most of squid options have a help-manual reference from official site.

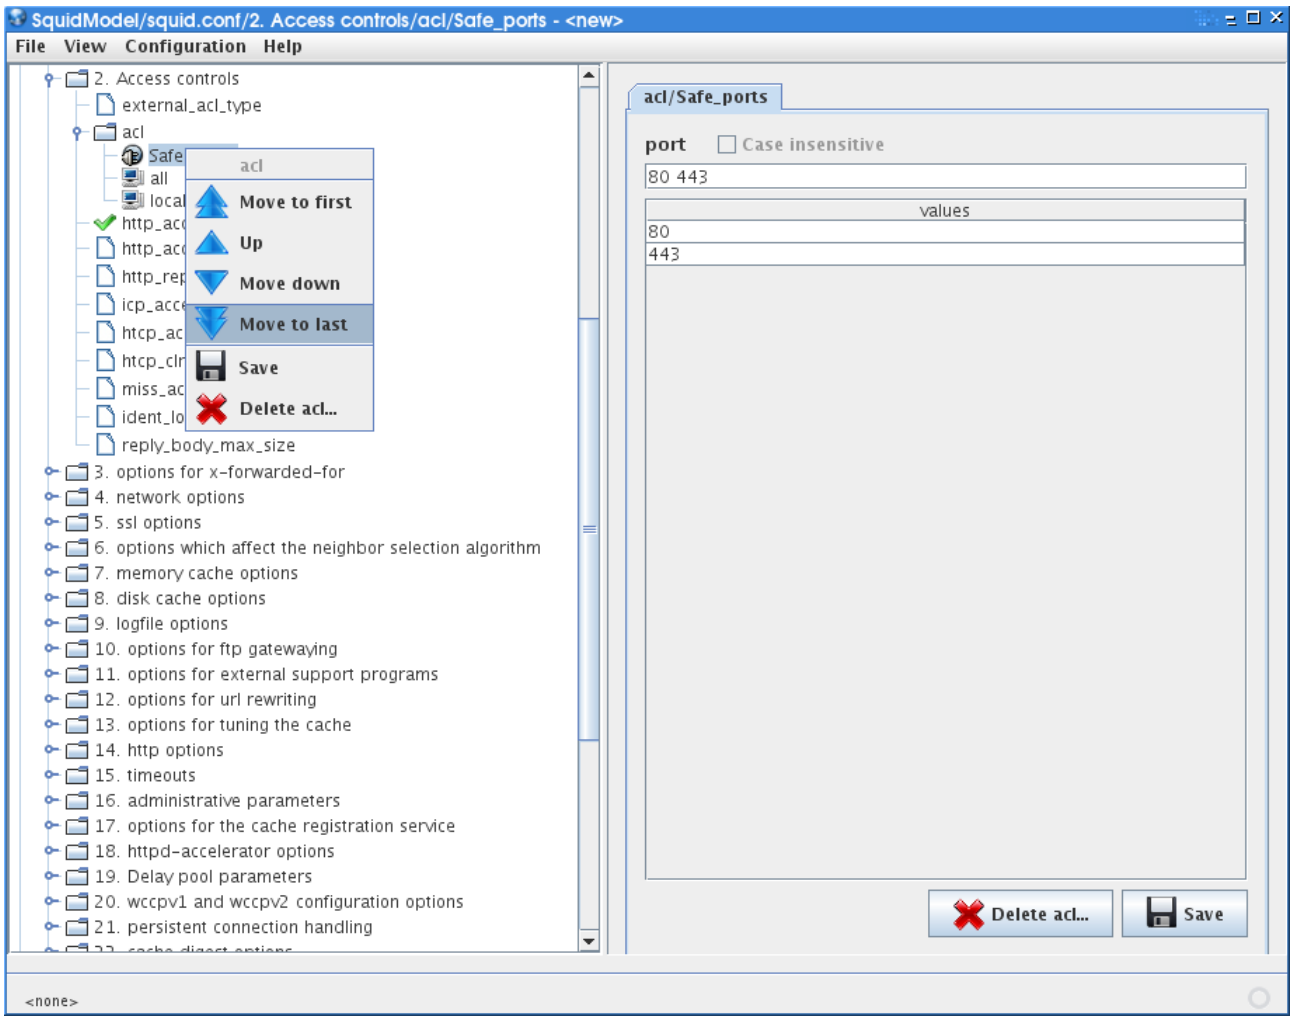

A trivial «File» menu...

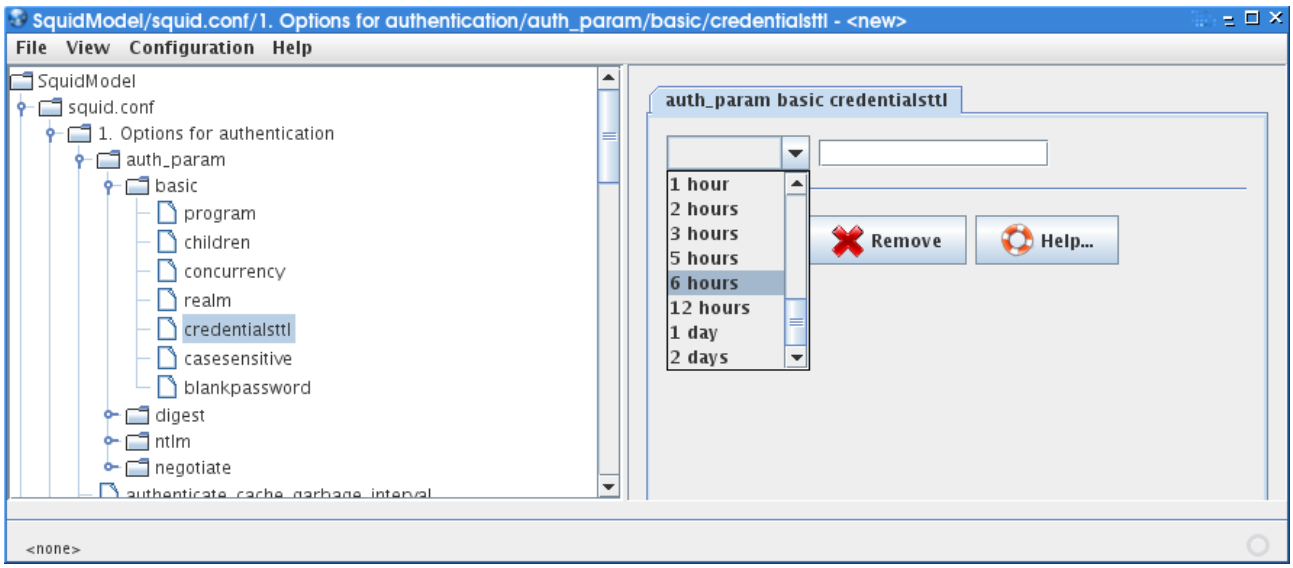

.. and standart view menu :)

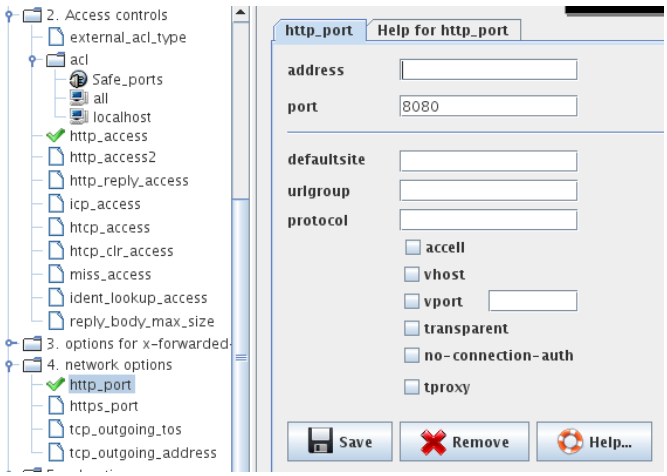

Element «squid.conf» in the tree structure of SquidModel — show the configuration in EDITABLE text editor. You can manually type the any text and right click to menu «Apply this text...» - SquidModel reread a configuration, but with your changes in text — vooalaa...

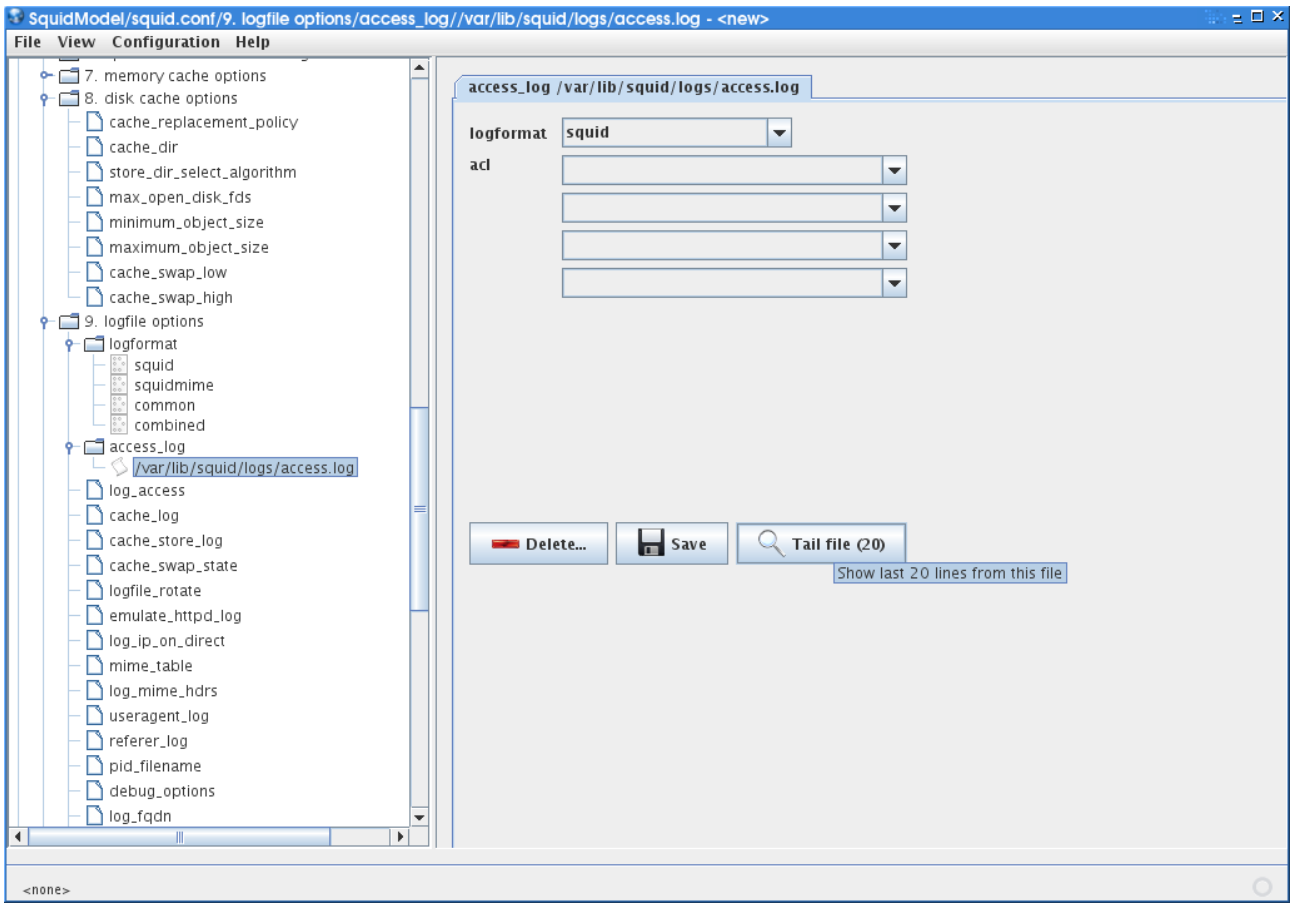

Acl section — you can create and delete acl, SquidModel model check the dependences of your acl. if ACL contains in *****_access, then you can't delete this.

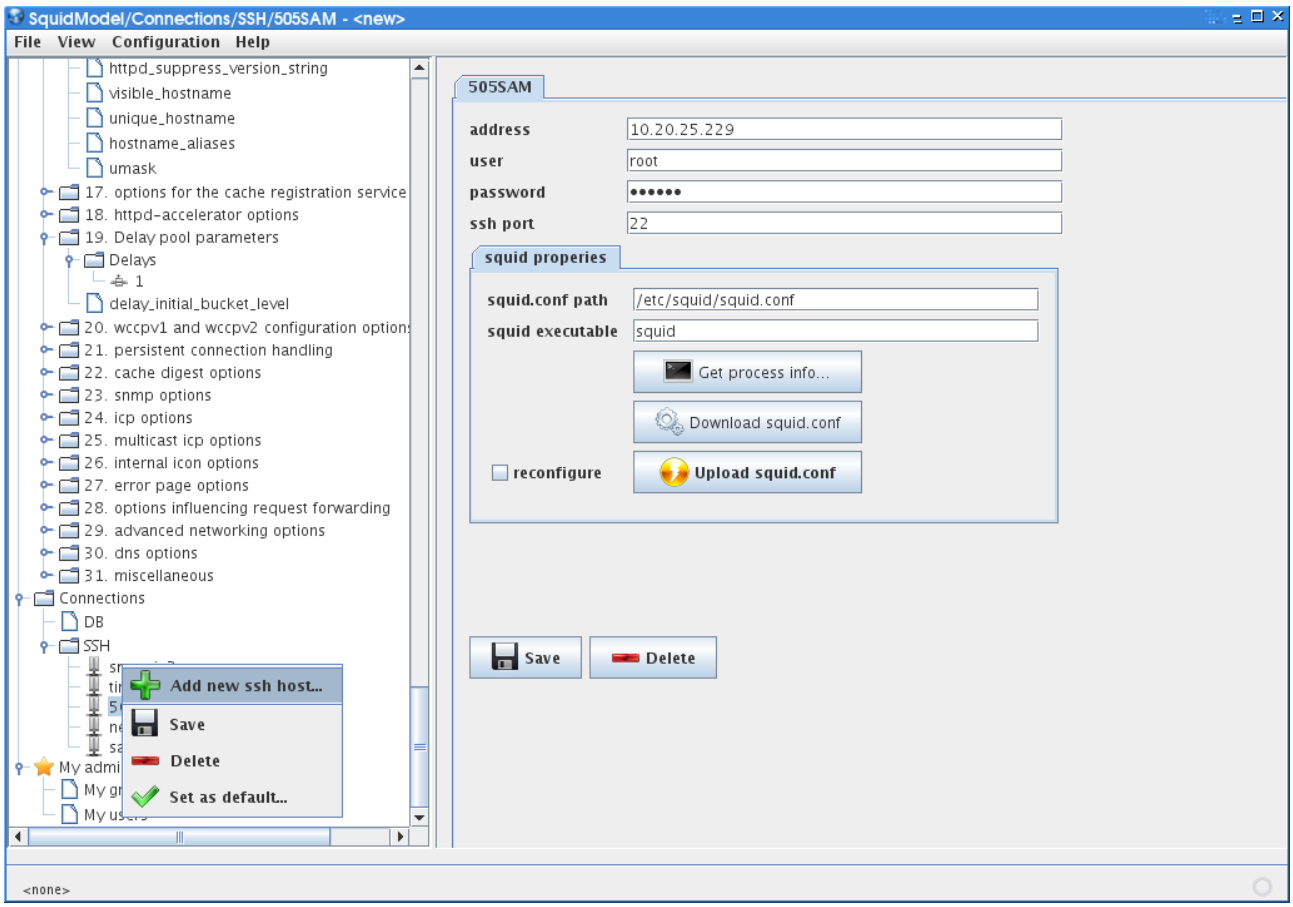

All listed options, in boolean, time, size, percent format — can visually changed.

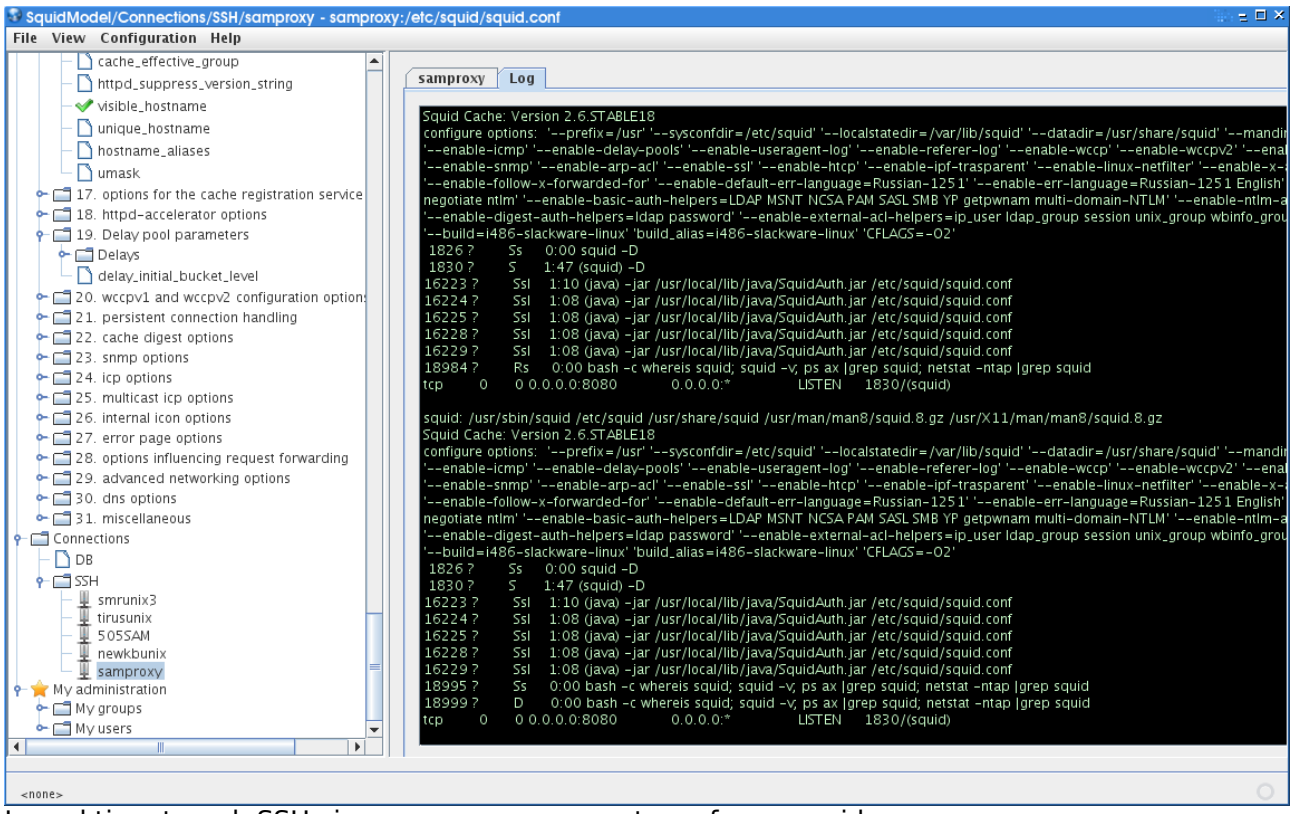

Trivial «http_port»

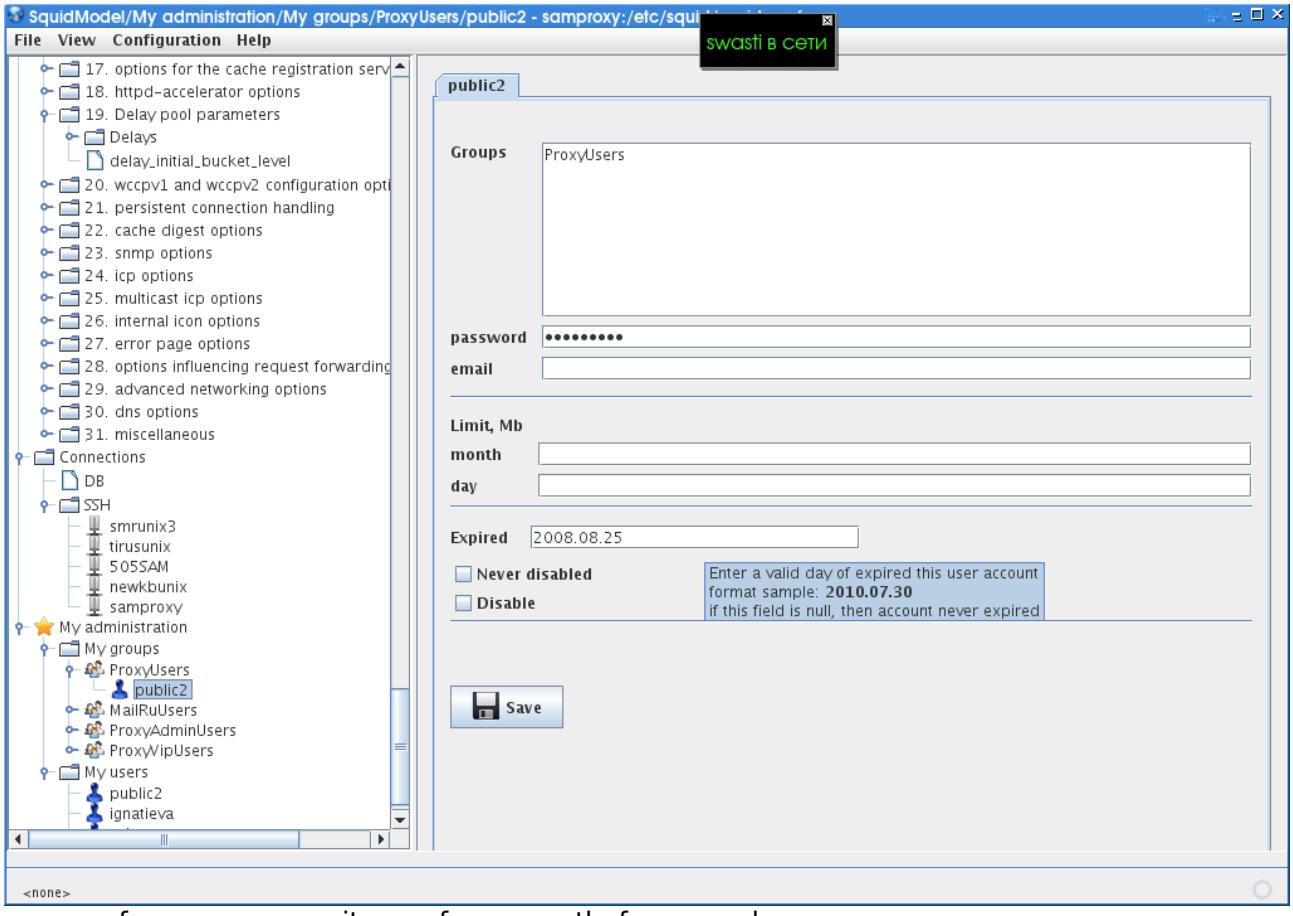

Access log section

SSH host section — manage your remote servers there...

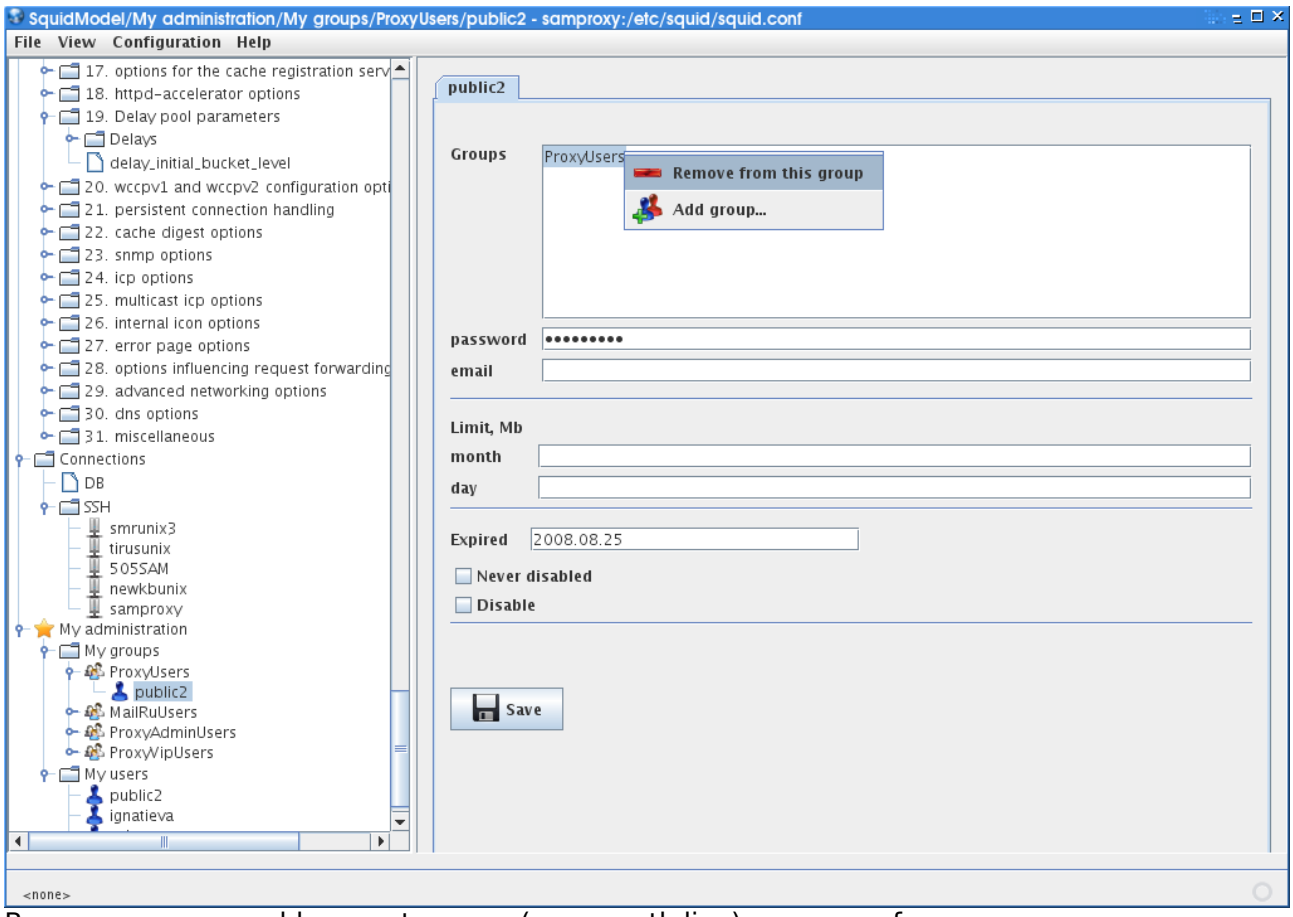

In real time trough SSH view a common parameters of your squid server...

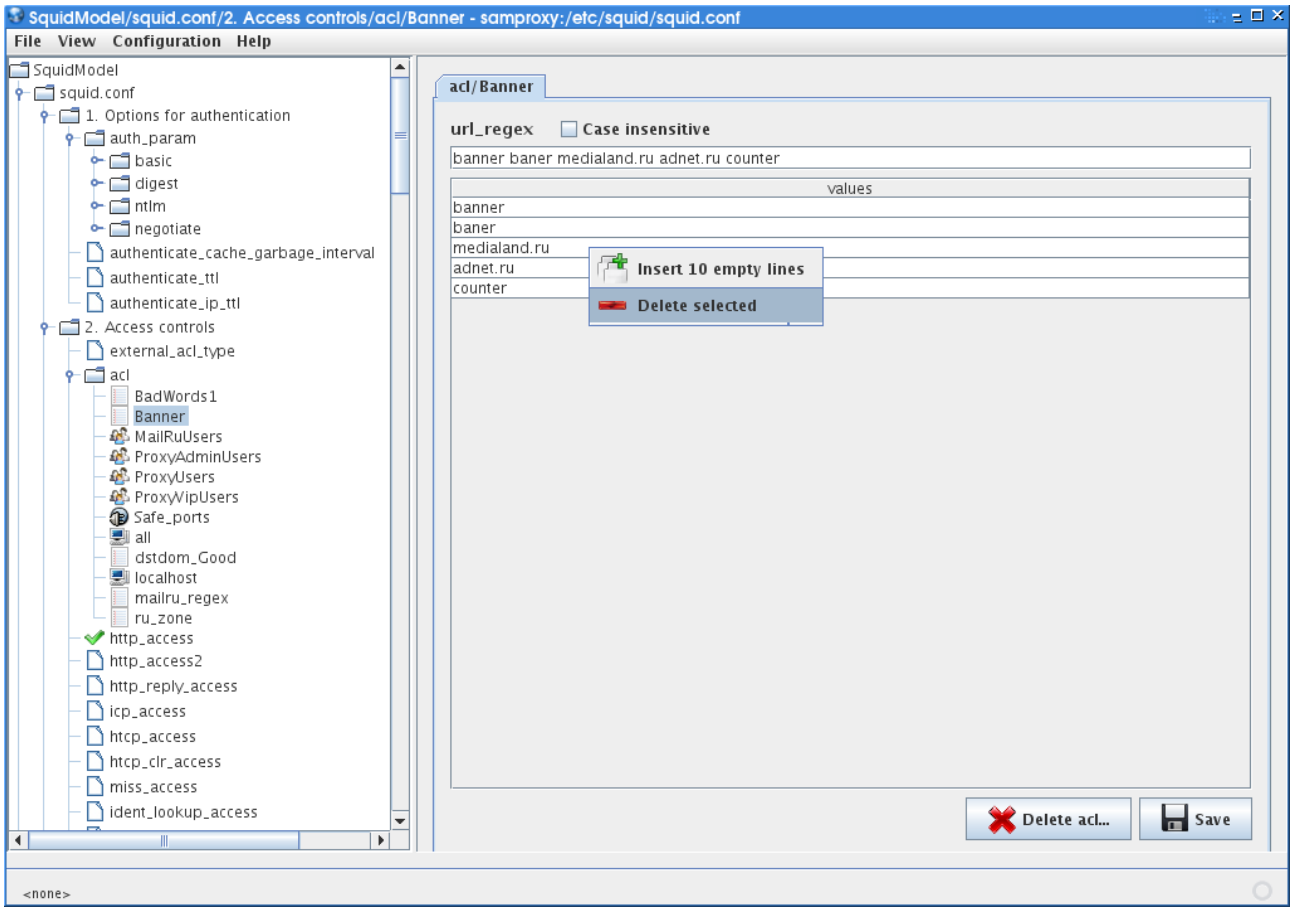

groups of users — users=items of proxy_auth, for example:
acl ProxyUsers proxy_auth public2 rambo frodo
... has next effect: You can show a group «ProxyUsers» and show users «public2» «rambo» and

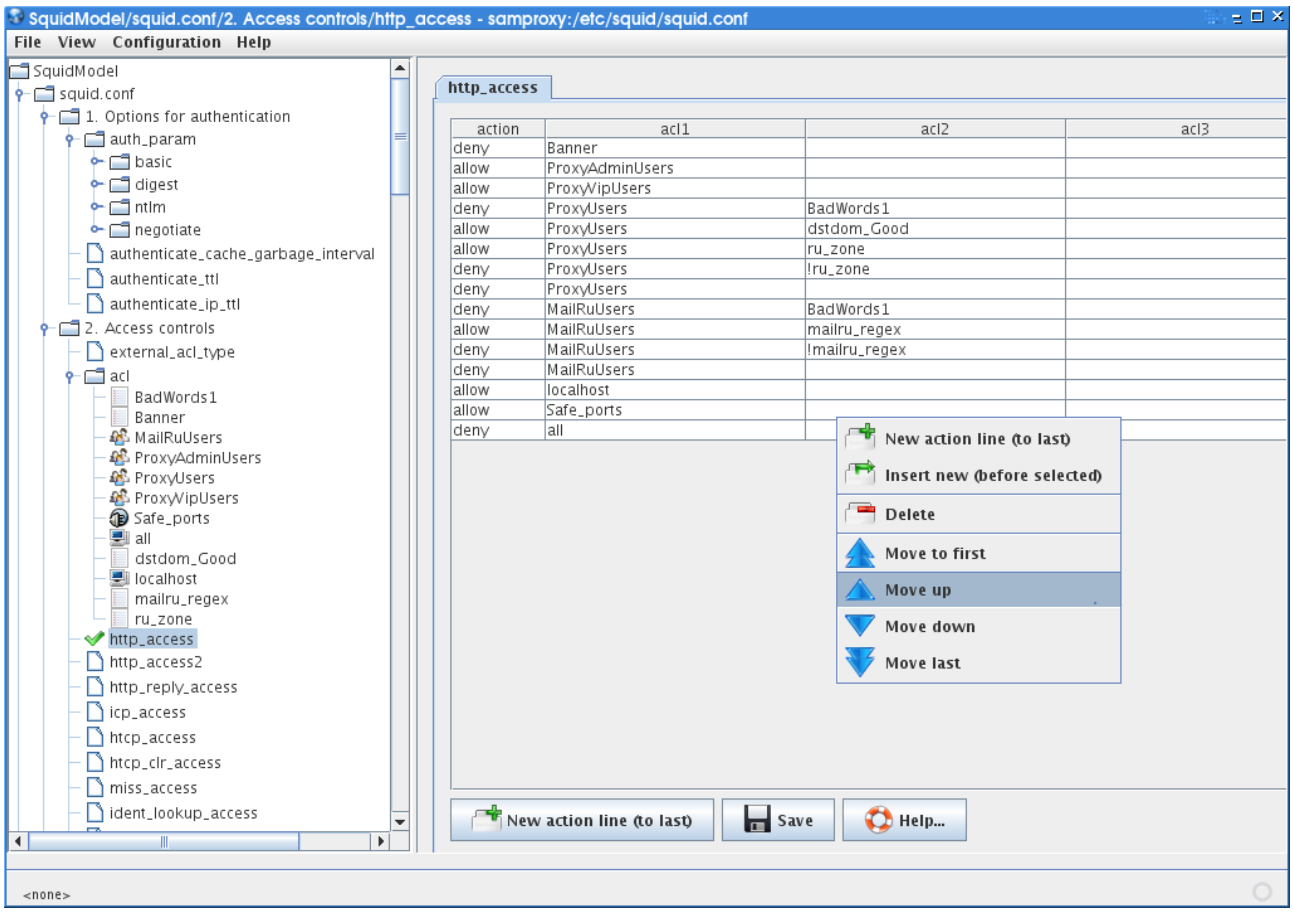

etc.

By mouse you can add a user to group (proxy_auth line) or remove from group

Manage a list of words for the same acl

Manage by mouse a priority of http_access page
